Prairie Ridge Preserve - North unit

Prescribed burn 8 May 2026 | Broadcast | reported 130 ac | burn boss Walters (Larson) | road map

Burn severity (satellite index)

- Unburned / very low (dNBR < 0.10): 7 ac
- Low (0.10 - 0.27): 43 ac
- Moderate-low (0.27 - 0.44): 50 ac
- Moderate-high (0.44 - 0.66): 0 ac
- High (> 0.66): 0 ac
- Mapped burn perimeter
- 1 km search radius around point
- Recorded lat/long

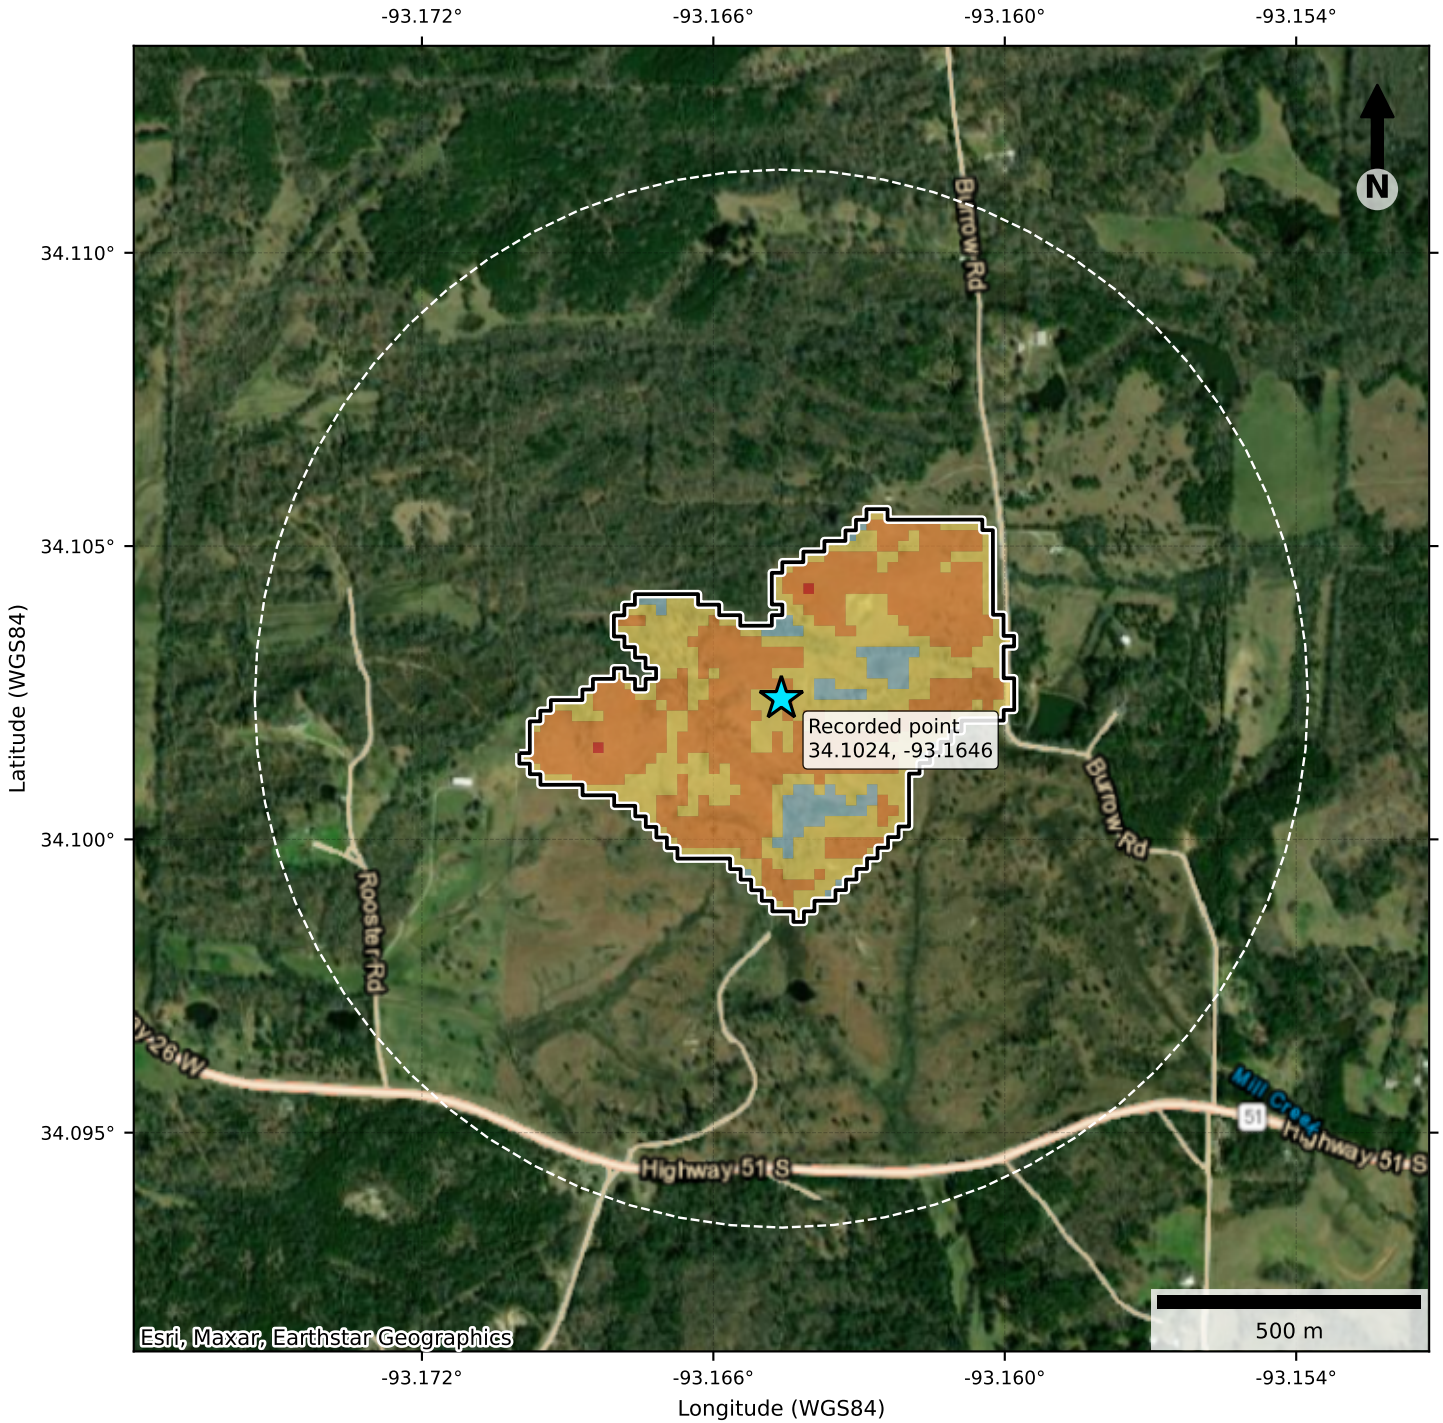

Reported: 130 ac Mapped: 100 ac (77% of reported)
Images: 12 Sentinel-2 + 10 Landsat
First clear image after burn: 1 day
Confidence: HIGH

Satellite estimate from a recorded point, date and acres (Sentinel-2 + Landsat, free data); not field-verified. Severity = green-up-corrected dNBR, Key & Benson (2006) classes, not calibrated to field (CBI) plots; prescribed burns under canopy often read as low/unburned even where surface fuels burned. Coordinates WGS84 decimal degrees.

Prairie Ridge Preserve - North unit

Prescribed burn 8 May 2026 | Broadcast | reported 130 ac | burn boss Walters (Larson) | aerial imagery with roads

Burn severity (satellite index)

- Unburned / very low (dNBR < 0.10): 7 ac
- Low (0.10 - 0.27): 43 ac
- Moderate-low (0.27 - 0.44): 50 ac
- Moderate-high (0.44 - 0.66): 0 ac
- High (> 0.66): 0 ac
- Mapped burn perimeter
- 1 km search radius around point
- Recorded lat/long

Reported: 130 ac Mapped: 100 ac (77% of reported)
Images: 12 Sentinel-2 + 10 Landsat
First clear image after burn: 1 day
Confidence: HIGH

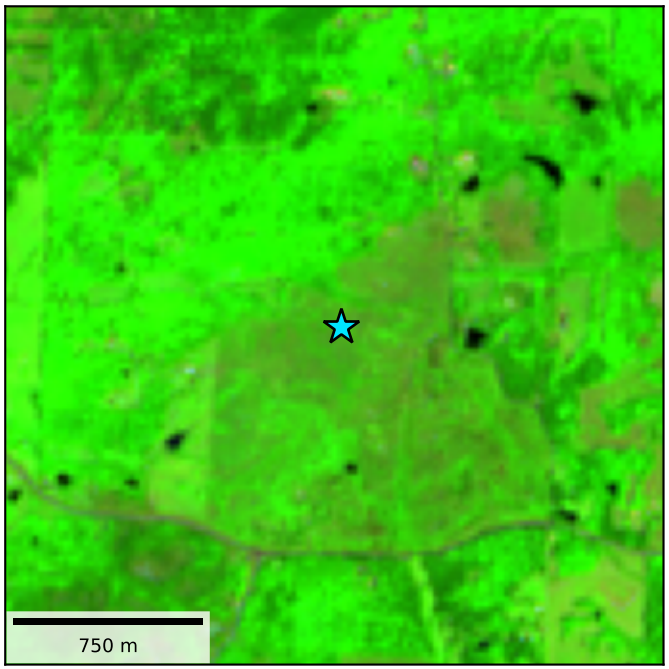

Satellite estimate from a recorded point, date and acres (Sentinel-2 + Landsat, free data); not field-verified. Severity = green-up-corrected dNBR, Key & Benson (2006) classes, not calibrated to field (CBI) plots; prescribed burns under canopy often read as low/unburned even where surface fuels burned. Coordinates WGS84 decimal degrees.

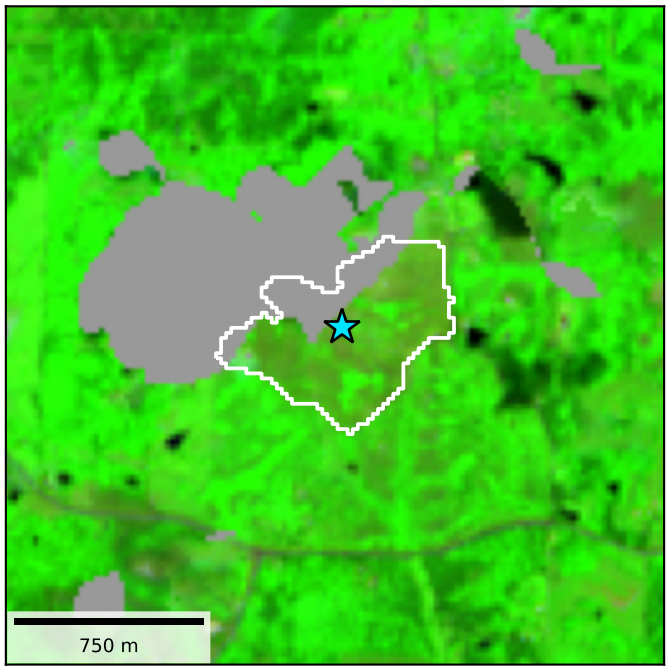

Prairie Ridge Preserve - North unit: satellite evidence and alternative outlines

Burn date 8 May 2026. False colour (SWIR-NIR-red): healthy vegetation green, fresh burn scar dark red/brown/purple. Images are medians of the 3 clearest looks before / after. Flat grey = no cloud-free Sentinel-2 view in the 45 days after the burn (Landsat was used there).

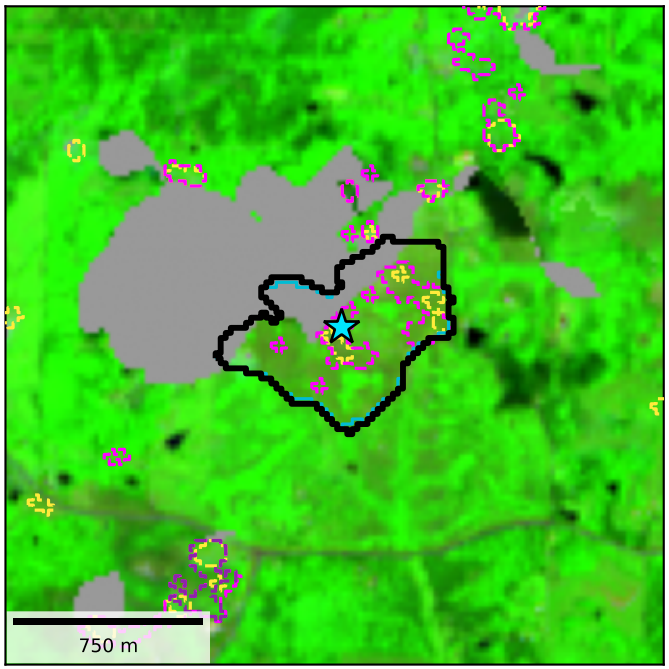

Sentinel-2 before burn

Sentinel-2 after burn

All method outlines (after-burn image)

Outlines from each method (for comparison only; the black outline is the main product)

- Main method (round 2): 100 ac
- Round 2 snapped to roads/streams/ridges: 95 ac
- Round 1 (Sentinel-2 only): 75 ac
- Round 1 snapped: 9 ac
- Standard: any darkening, ignores point/date: 216 ac

Projection: UTM (EPSG:32615); 20 m pixels. Black/white outline = main method. Star = recorded lat/long.
